

1. Replace Country/City dropdowns with a single "Location Search" field

New (Equivalent) Repair / alternative

Spare part

Wear part

DDP basis Used only as a reference for suppliers

Contry City

We need to improve the Delivery location field in our RFQ form. Currently we have two dropdowns: Country City. The problem is that the lists are very large (z.b. USA) and slow to load.

Replace both fields with one field: "Delivery location" with autocomplete search.
Example: User types "Mun" → suggestions: Munich, Germany, Münster, Germany

Replace Country + City dropdowns with one searchable field

Autocomplete suggestions
Suggestions must load via AJAX (not preload all cities)
Store the selected City + Country
Must work inside our WordPress RFQ form
Preferred approach
JS library like Tom Select or Select2
Use a location API (Teleport, GeoDB, or similar)

2. search field for Manufacturer

Manufacturer Start typing to select or enter a manufacturer

Machine model (optional): Serial number (optional):

Part number Part description Short description (e.g. housing, seal, pump) Quantity

We also want the same autocomplete search field for Manufacturer instead of a long dropdown list. Users should be able to type and search manufacturers dynamically (AJAX), similar to the location search.

Manufacturers are provided in CSV format.

In any case, please ask any questions you may have — and are happy to help.

MineROQ_Manufacturers_Master_List.csv

MineROQ_Manufacturers_Master_List.csv 1 kB

3. Required fields / optional

Machine model (optional): Serial number (optional):

Part number Part description Short description (e.g. housing, seal, pump)

Add another part You can add up to 10 parts

Part number Part description

We also want the same autocomplete search field for Manufacturer instead of a long dropdown list. Users should be able to type and search manufacturers dynamically (AJAX), similar to the location search.

Accepted condition

Repair Wear part

Target price, USD (optional) DDP basis Used only as a reference for suppliers

Delivery location Contry City

Description (optional)

Any additional details or notes for suppliers

Attach Files (optional)

Drop your RFQ document here or click to upload

Please upload specifications, part lists or drawings as a single PDF file. Other file formats are currently not supported. If you only have photos or scans, please convert them to PDF before uploading.

4. Required fields / optional

Drop your RFQ document here or click to upload

Please upload specifications, part lists or drawings as a single PDF file. Other file formats are currently not supported. If you only have photos or scans, please convert them to PDF before uploading.

Currently users can click Continue, but if required fields are missing the form blocks the next step without clearly showing which fields are required. Please improve this behavior:

Clearly mark required fields with an asterisk (*)
Example: Manufacturer, Part number*, Quantity*.
If the user clicks Continue and a required field is empty, highlight the field and show a short message like: "This field is required".
The user should immediately see which fields must be filled before continuing. This should work on all steps of the RFQ form.

5. Correct new text

Priority request

Mark this request as priority to receive faster responses from suppliers.

Sealed bidding

Hide competing offers. Suppliers cannot see other bids until the request is closed

Private request

Visible only to registered suppliers and not indexed by search engines.

Notify relevant suppliers

Suppliers subscribed to this manufacturer or category will be notified.

6. On the RFQ review page, please hide fields that are empty instead of showing empty rows.

On the RFQ review page, please hide fields that are empty instead of showing empty rows.

8. There is a problem with the Submit quote button.

Currently suppliers can submit an offer only for requests marked as “Priority”. For normal requests the Submit quote button does not work / is blocked, even though it should be possible to send offers. Expected behavior: Suppliers should be able to submit quotes for all open requests, not only priority ones. Priority requests should only affect visibility or notifications, not the ability to submit a quote. Please check why the quote submission is restricted to priority requests and fix the logic.

No public bidding.
No price disclosure.

Für Milestone 3 (Just FYI)

We need to improve the messaging logic.

Currently buyers cannot start a message conversation after receiving an offer.

Messaging should be available once the first quote is submitted.

The conversation should be linked to the specific RFQ/request.

Example workflow:

Buyer publishes request

Supplier submits quote

Buyer can open chat with that supplier directly from the request page

Please adjust the logic so messaging becomes active after a quote is submitted.
