## Messages

### Technical requirements — Messaging (Chat)

#### 1. RFQ reference in chat

Each chat must be linked to a specific RFQ.

At the top of the conversation display the RFQ reference (ID + Machine name):

Example:

RFQ MB265 – Caterpillar 8X3748

This ensures both buyer and supplier clearly understand which RFQ the conversation refers to.

#### 2. Message button behavior

When the user clicks Message in a quote or RFQ view: the system must open the chat with that specific supplier the chat must automatically be linked to the corresponding RFQ

This ensures the conversation is always tied to the correct RFQ.

#### 3. File attachments in chat

The chat must allow users to attach files.

Supported actions:

Attach file

send PDF or image files

This allows suppliers and buyers to exchange:

catalogs

technical specifications

product photos

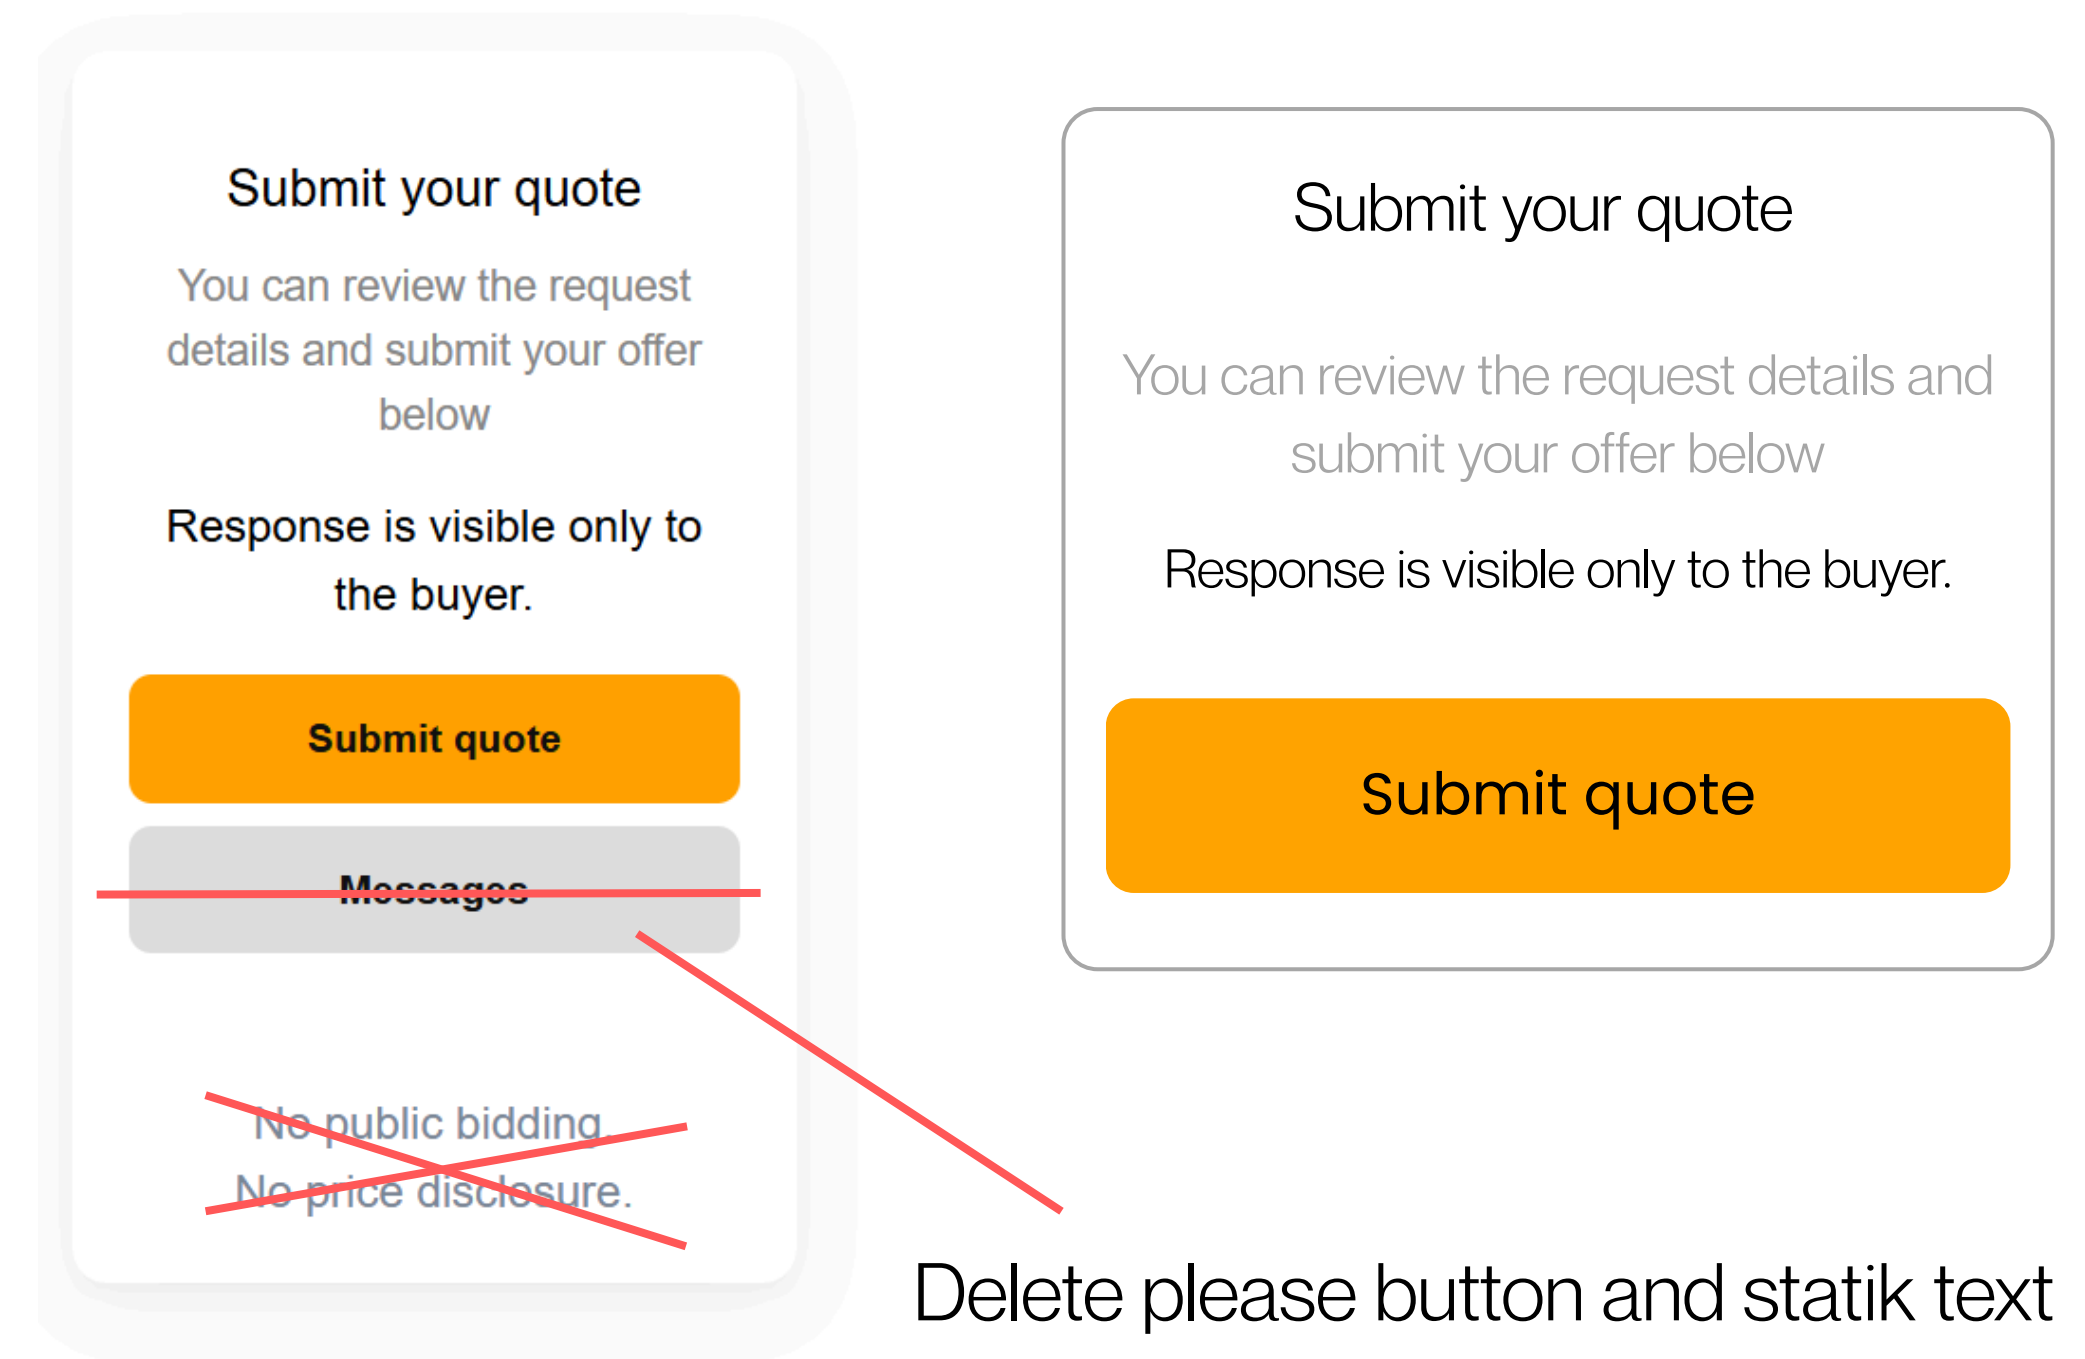

documents

#### 4. Chat behavior after RFQ closure

When an RFQ is closed, the related chat should become read-only.

Users can still view the conversation history, but cannot send new messages.
